

Project Sprint #1

The Solitaire game is described in CS449HomeworkOverview. You should read the description very carefully.

In this assignment, you aim to specify the requirements (i.e., user stories and acceptance criteria) of the target software that allows a human player to play a Solitaire game. These requirements will be fully implemented by the end of sprint 3. The minimum features include **choosing the board size and type, starting a new game, making a move, determining if a game is over**. The following is a sample GUI layout.

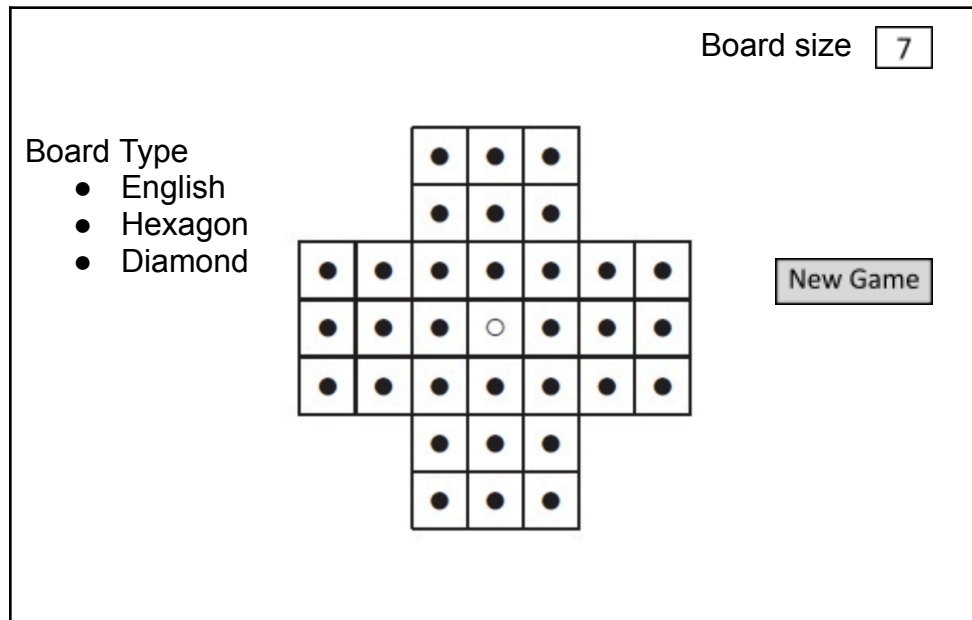

Figure 1. Sample GUI layout of the first working program by the end of Sprint 3

Use the following tables to document your user stories and acceptance criteria.

You are required to use the free ChatGPT or another LLM to complete two user stories and two of their respective acceptance criteria. You must ensure that the generated user stories are correct and fix them if not. At the end of the submission, provide screenshots of your LLM prompts and answers, along with the description of errors the LLM made that you had to correct. Points will be deducted if no screenshots/description are provided.

For the other user stories and acceptance criteria, you are not required to use LLM.

I. User Stories (3 points)

- **User Story Template:** As a <role>, I want <goal> [so that <benefit>]

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
1	Choose a board size	As a player, I want to choose the size of the Peg Solitaire board so that I can play a game with the level of complexity I prefer.	4	3
2	Choose the board type	As a player, I want to choose the type of Peg Solitaire board so that I can play different board layouts.	5	3

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
3	Start a new game of the chosen board size and type	As a player, I want to start a new game with board size and type of my choosing so that I can begin a game with my board selections.	1	3
4	Make a move in a game	As a player, I want to select a peg and an empty space to make a move so that I can progress the game.	2	5
5	A game is over	As a player, I want the game to display a message when there are no more valid moves so that I know the game has ended.	3	3

II. Acceptance Criteria (AC) (12 points): Add/delete rows as needed.

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inProgress)
1. Choose a board size	1.1	AC 1.1 Display available board sizes Given the player is on the new game/setup screen When the player chooses to select a board size Then the game should display all available board sizes	toDo
	1.2	AC 1.2 Select a board size Given the available board sizes are displayed When the player selects a board size Then the selected board size should be recorded for the new game	toDo
	1.3	AC 1.3 Start a game with the selected size Given the player has selected a valid board size When the player starts a new game Then the game should create and display the selected board size	toDo
	1.4	AC 1.4 Invalid board size Given the player has not selected a valid board size When the player attempts to start a new game Then the game should prevent the game from starting and prompt the player to select a valid board size	toDo
2. Choose the board type	2.1	AC 2.1 Display available board types Given the player is on the new game/setup screen When the player chooses to select a board type Then the game should display all available board types	toDo
	2.2	AC 2.2 Select a board type Given the available board types are displayed When the player selects a board type Then the selected board type should be recorded for the new game	toDo
	2.3	AC 2.3 Start a game with the selected type Given the player has selected a valid board type When the player starts a new game Then the game should create and display the selected board layout	toDo
	2.4	AC 2.4 Invalid board type Given the player has not selected a valid board type When the player attempts to start a new game Then the game should prevent the game from starting and prompt the player to select a valid board type	toDo
3. Start a new game of the chosen board size and type	3.1	AC 3.1 Start a new game Given the player has selected a valid board size and type When the player selects the start button Then the game should display a new board using the selected board size and type	toDo
	3.2	AC 3.2 Board size not selected Given the player has not selected a board size When the player selects the start button Then the game should not start And should prompt the player to select a valid board size	toDo

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inProgress)
	3.3	AC 3.3 Board type not selected Given the player has not selected a board type When the player selects the start button Then the game should not start And should prompt the player to select a valid board size	toDo
4. Make a move in a game	4.1	AC 4.1 Make a valid move Given the player has selected a peg When the player selects a valid empty space Then the peg should move to the empty space And the jumped peg should be removed	toDo
	4.2	AC 4.2 Invalid move Given the player has selected a peg When the player selects an invalid space Then the peg should not move And the board should stay the same	toDo
5. A game is over	5.1	AC 5.1 More than one peg remains Given the game is in progress When the player has no valid moves remaining Then the game should end And display a game-over message	toDo
	5.2	AC 5.2 One peg remains Given the game is in progress When the player makes a valid move that leaves one peg Then the game should end And display a win message	toDo

for a peg solitaire game, write the user stories and acceptance criteria (in given-when-then format) for choosing a board size and choosing the board type

Here are user stories and acceptance criteria for a **Peg Solitaire** game focused on choosing the **board size** and **board type**.

1. Choose Board Size

User Story

As a player, I want to choose the size of the Peg Solitaire board so that I can play a game with the level of complexity I prefer.

Acceptance Criteria

Scenario 1: Display available board sizes

- Given the player is on the new game/setup screen
- When the player chooses to select a board size
- Then the game should display all available board sizes.

Scenario 2: Select a board size

- Given the available board sizes are displayed
- When the player selects a board size
- Then the selected board size should be recorded for the new game.

Scenario 3: Start a game with the selected size

- Given the player has selected a valid board size
- When the player starts a new game
- Then the game should create and display the board using the selected size.

Scenario 4: Invalid board size

- Given the player has not selected a valid board size
- When the player attempts to start a new game
- Then the game should prevent the game from starting and prompt the player to select a valid board size.

2. Choose Board Type

User Story

As a player, I want to choose the type of Peg Solitaire board so that I can play different board layouts.

Acceptance Criteria

Scenario 1: Display available board types

- Given the player is on the new game/setup screen
- When the player chooses to select a board type
- Then the game should display all available board types.

Scenario 2: Select a board type

- Given the available board types are displayed
- When the player selects a board type
- Then the selected board type should be recorded for the new game.

Scenario 3: Start a game with the selected type

- Given the player has selected a valid board type
- When the player starts a new game
- Then the game should create and display the selected board layout.

Scenario 4: Invalid board type

- Given the player has not selected a valid board type
- When the player attempts to start a new game
- Then the game should prevent the game from starting and prompt the player to select a valid board type.

I did not observe any errors in the generated user stories and did not make any corrections.
